NEWS RELEASE

System for terminal cargo movement is rebounding

Piti, Guam, June 14, 2023: The Port Authority of Guam, through its contractor G4S, has replaced two antennas which service the Terminal Operating System (TOS) allowing for real-time data on cargo movement.

“The Port resorted to “old school” communications utilizing FEMA handheld radios after nine antennas for the TOS system were destroyed by Typhoon Mawar,” said Port General Manager Rory J. Respicio. “Two antennas have been replaced by G4S, allowing cargo checkers the ability to enter container information directly into portable hand held units for real-time wireless transmission into our central TOS database.”

G4S is in the process of replacing the remaining 7 antennas, the cost of which the Port has included as part of its damage assessment.

The TOS system is a vital part of operations which controls the movement and storage of cargo in and around the terminal yard. It provides real-time reporting on the status of containers, its location, aids in vessel planning, yard management and equipment allocation.

Cargo and Fuel Processed Since Reopening

The following fuel and cargo commodities have been processed and released into our island community since reopening the Port on Sunday, May 28, 2023:

- 240 reefers;
- 1527 containers with dry goods;
- 1540 bundles of rebar;
- 2 boxed steel pipes;
- 35 bundle steel plates;
- 556 vehicles;
- 129 units of general cargo;
- 1 excavator, 4 trucks, 1 tractor;
- 1 bundle of chassis; and
- 5 barges – fuel operations.
